

# Bitcoin Popularity & Market Analysis Template( 9:04pm 24/26)

## 1. What I'm Analyzing

In this report we will be analysing Bitcoin's popularity, usage, and market performance. From February 24th to March 24th which is the current date.time: 9:04pm. The goal is to understand how price, usage, and sentiment evolved during this timeframe.

## 2. Data Sources

All metrics and visuals are sourced from Messari's Bitcoin dashboard

## 3. Popularity Indicators

- Price movement
- Trading volume
- Social mentions (if available)
- Active addresses
- Transaction count

## 4. Basic Observations

Hourly changes thru about the entire chart, observed about a month of change. changes constantly making it hard to exactly track. It starts off under the blue average line consistently but around the end you see a lot of spikes past it. The chart looks to rolcoaster closer to the blue average line around the middle to end of this chart going back and forth like a frequency.

## 5. Changes Over Time

1. until March 4th 9am where the price jumps a noticeable amount more going from 67793 march 4th 4am, to 71497(march 4th 9am).
2. 9.66% past month
3. Highest peak \$75,618.70 (date and time: 03-17-26, 1am)
4. Lowest peak \$62974.83 (date and time: 02-24-26, 1pm)
5. 24h increases, 7d decreases
6. Volume fell 20.38% price rose 9.11%

## 6. Key Events Affecting Bitcoin

| Trend | Why It Matters |

| Bitcoin payments inside Signal | Private P2P payments for 70M users |

| Cashu Ecash tokens | Ultra-private Bitcoin transactions |

| Decentralized messaging apps | No central servers, no surveillance |

| Messaging apps as wallets | Chat + pay in one place |

| Lightning micro-payments | Instant tipping + micro-commerce |

| Global adoption via messaging | Easiest on-ramp for new Bitcoin users |

## 8. Visuals to Include

## 9. Overall Interpretation

First let me acknowledge there could be other factors affecting the price and volume of bitcoin, these are just the ones i think might make a difference. From last month the value of bitcoin has increased 9.11 percent. This increase could be because of the increase in accessibility, increasing true messaging, as stated in trends, and privacy-focused tools like Cashu—may be contributing to increased adoption. However this isn't consistent on a weekly basis as you can see in change over time it is 7 days decreasing.

**10. Limitations** The dataset covers only one month, with hourly fluctuations that make long-term patterns harder to identify. Only one primary chart was used; additional charts (volume, active addresses, hash rate) would provide a more complete picture. Comparing

Bitcoin to other major cryptocurrencies would also help determine whether its performance is unique or part of a broader market trend.
